INDEX TO SUBJECTS

A

Acetoacetic ester: Glucose and, compounds (MOORE, ERLANGER, and WEST) 43

Albumin: Egg, crystalline, hydrolysis, amino nitrogen, cystine, tyrosine, and tryptophane liberation rate (CALVERY, BLOCK, and SCHOCK) 21

—, —, peptic hydrolysis products, fractionation (CALVERY and SCHOCK) 15

Ov-, isoelectric point, factors influencing (SMITH) 473

Alkaloids: Ergot (JACOBS and CRAIG) 759, 767

Aluminum: Biological material, determination, colorimetric (EVELETH and MYERS) 449

Storage, intravenous injection effect (EVELETH and MYERS) 467

Amino acids: Dissociation constants, apparent acid, aqueous formaldehyde solution (DUNN and LOSHAKOFF) 691

Formol titration, glass electrode (DUNN and LOSHAKOFF) 359

Pepsin, crystalline, determination (CALVERY, HERRIOTT, and NORTHROP) 11

(2-Aminoethyl) disulfide: Bis-, cystine and methionine inadequacy, growth relation (JACKSON and BLOCK) 135

Amino-2-hydroxypropane: 1-, synthesis, new (LEVENE) 153

Amino-N-methylhistidine: *dl*-, growth effect (FISHMAN and WHITE) 175

Amino nitrogen: Egg albumin, crystalline, hydrolysis, liberation rate (CALVERY, BLOCK, and SCHOCK) 21

Anemia: Hemoglobin production, liver function, nitrogen metabolism, liver injury by chloroform, effect (DAFT, ROBSCHEIT-ROBBINS, and WHIPPLE) 391

Apparatus: Gasometric methods, Van Slyke, vessels for solution storage (HOLMES) 411

Asparagine: Tobacco leaves (VICKERY and PUCHER) 157

B

Bacillus: Tubercle. *See* Tubercle bacillus

Bean: Jack. *See* Jack bean

Bile: Cholesterol, free and combined, determination (RIEGEL and ROSE) 117

Bile acids: Conjugated, synthesis (CORTESE and BAUMAN) 779

Bipyridine: Iron, available, determination, use in (KOHLER, ELVEHJEM, and HART) 49

Blood: Arterial, carbon dioxide capacity, carbon dioxide inhalation effect (HIMWICH, GILDEA, RAKIETEN, and DUBOIS) 383

Helium solubility in (HAWKINS and SHILLING) 649

Nitrogen solubility in (HAWKINS and SHILLING) 273

Blood plasma: Specific gravity and protein, relation (WEECH, REEVES, and GOETTSCH) 167

Blood serum: Solute molality, specific gravity and water relation (SUNDERMAN) 111

Specific gravity and protein, relation (WEECH, REEVES, and GOETTSCH) 167

— —, water and solute molality, relation (SUNDERMAN) 111

Blood sugar: Insulin effect (DOTTI and HRUBETZ) 141

Body fluids: Halides, distribution, chronic bromide intoxication (MASON) 61

Bromide: Intoxication, chronic, body fluids, halides distribution (MASON) 61

Bromophenylmercapturic acid: *p*-, urine, determination (STEKOL) 279

Buffer: Thioglycolic acid oxidation, metal, dithiol and, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 537

C

Calcium: Deposits, pathological (MEEKER and KESTEN) 289

Determination, potentiometric (TENDELOO) 333

Canavalin: Jack bean crystalline globulin from trypsin digestion of (SUMNER and HOWELL) 607

Carbinol: Methylcyclohexyl-, methylhexyl-, configurational relationship (LEVENE and HARRIS) 55

4-Carboline carbonic acids: Synthesis (JACOBS and CRAIG) 759

Carbon dioxide: Capacity, blood, arterial, carbon dioxide inhalation effect (HIMWICH, GILDEA, RAKIETEN, and DUBOIS) 383

Carbonic acids: 4-Carboline, synthesis (JACOBS and CRAIG) 759

Carotene: Determination (CLAUSEN and MCCOORD) 89

Cations: Ovalbumin isoelectric point, effect (SMITH) 473

Cellulose: Enzyme adsorption, effect (TAUBER) 753

Cerebrosidase: Nature (THANNHAUSER and REICHEL) 311

Polydiaminophosphatide hydrolysis by polydiaminophosphatase, relation

(Thannhauser and Reichel) 311
Chloroform: Liver injury, function, hemoglobin production, nitrogen metabolism, anemia, relation (Daft, Robscheit-Robbins, and Whipple) 391
Cholesterol: Blood, dextrose ingestion effect (Fitz and Bruger) 297
— serum, esterification, tissue extracts effect (Sperry) 599
Free and combined, bile, determination (Riegel and Rose) 117
Heat-treated, provitamin D (Hathaway and Lobb) 105
Cholic acid: Glycodesoxy-, synthesis (Cortese and Bauman) 779
Citric acid: Biological material, microdetermination (Pucher, Sherman, and Vickery) 235
Metabolism, oral administration effect (Sherman, Mendel, and Smith) 265
Origin, animal metabolism (Sherman, Mendel, and Smith) 247
Citrus: Leaves, fumigated, hydrocyanic acid (Bartholomew and Raby) 655
Copper: Tissues (Hahn and Fairman) 161
Copper selenite: Nitrogen determination, Kjeldahl, catalyst (Schwoegler, Babler, and Hurd) 749
Corpus luteum: Vitamin C, estrous cycle and pregnancy, relation (Biskind and Glick) 27
Cottonseed oil: Body fat, effect (Spadola and Ellis) 205
Creatinine: Blood (Danielson) 181
Cyanhydrin: Dihydrostrophanthidin, syntheses (Jacobs and Elderfield) 625
Cystamine: Cystine and methionine inadequacy, growth relation (Jackson and Block) 135
Cystine: -Deficient diet, cystamine, inadequate methionine, growth relation (Jackson and Block) 135
Egg albumin, crystalline, hydrolysis, liberation rate (Calvery, Block, and Schock) 21
Oxidation (Toennies and Lavine) 571
(Lavine) 583
Cystine disulfoxide: *l*-, isolation (Toennies and Lavine) 571
—, reactions (Lavine) 583

D

Deuterium: Fatty acids desaturation indicator (Schoenheimer and Rittenberg) 505
Dextrose: Blood cholesterol, ingestion effect (Fitz and Bruger) 297
See also Glucose
Diet: Vitamin-free, lactoflavin in (Supplee, Flanigan, Hanford, and Ansbacher) 787

Diffusion layers: Technique for study (TEORELL) 735
Dihydrostrophanthidin: Cyanhydrin syntheses with (JACOBS and ELDERFIELD) 625
Disease: Urine porphyrins (DOBRINER) 1
Disulfide groups: Protein, reduction, immunological effect (BLUMENTHAL) 433
Dithiol: Thioglycolic acid oxidation, metal, buffer and, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 537
Dyestuffs: Yeast extract fermentation and respiration, effect (MICHAELIS and SMYTHE) 717

E

Egg: Albumin, crystalline, hydrolysis, amino nitrogen, cystine, tyrosine, and tryptophane liberation rate (CALVERY, BLOCK, and SCHOCK) 21
—, —, peptic hydrolysis products, fractionation (CALVERY and SCHOCK) 15
Electrode: Glass, amino acids and peptides determination, formol titration (DUNN and LOSHAKOFF) 359
Electrolytes: Blood serum (SUNDERMAN) 111
Body, body water distribution, relation (HARRISON, DARROW, and YANNET) 515
Enzymes: Adsorption, cellulose effect (TAUBER) 753
See also Cerebrosidase, Pepsin, Polydiaminophosphatase, Trypsin
Ergot: Alkaloids (JACOBS and CRAIG) 759, 767
Estrous cycle: Corpus luteum vitamin C, relation (BISKIND and GLICK) 27
Excretion: Paths, alkaline and saline waters, effect(HELLER and HADDAD) 439

F

Fat(s): Body, cottonseed oil effect (SFADOLA and ELLIS) 205
Fatty acids, milk, goat (RIEMENSCHNEIDER and ELLIS) 219
Metabolism, plants (MACLACHLAN) 197
Slash-pine growing tips (HALL and GISVOLD) 487
Fatty acids: Desaturation, deuterium as indicator (SCHOENHEIMER and RITTENBERG) 505
Milk fat, goat (RIEMENSCHNEIDER and ELLIS) 219
Ferrous sulfate: Starch hydrolysis (BROWN) 417
Flavin: Lacto-, vitamin-free diets, contaminant (SUPPLEE, FLANIGAN, HANFORD, and ANSBACHER) 787
Formol: Titration, amino acids and peptides determination (DUNN and LOSHAKOFF) 359

G

Gas: Analysis, Van Slyke, vessels for solution storage (HOLMES) 411
Glass: Electrode, amino acids and peptides determination, formol titration (DUNN and LOSHAKOFF) 359

Globulin: Jack bean, crystalline, from canavalin (SUMNER and HOWELL) 607
Glucose: Acetoacetic ester and, compounds (MOORE, ERLANGER, and WEST) 43
Metabolism, trypanosomes (REINER, SMYTHE, and PEDLOW) 75
See also Dextrose
Glucose - 4 - phosphate: (RAYMOND) 375
Glutamine: Tobacco leaves (VICKERY and PUCHER) 157
Glycodesoxycholic acid: Synthesis (CORTESE and BAUMAN) 779
Glycolic acid: Thio-, oxidation, metal, buffer, and dithiol, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 537
Goat: Milk fat fatty acids (RIEMENSCHNEIDER and ELLIS) 219
Gonococci: Pyruvic acid oxidation, effect (BARRON) 695
Growth: *dl*-Amino-N-methylhistidine availability (FISHMAN and WHITE) 175
Cystamine with cystine and methionine inadequacy, relation (JACKSON and BLOCK) 135
Gum: Lemon tree (ANDERSON, RUSSELL, and SEIGLE) 683

H

Halides: Body fluids, distribution, chronic bromide intoxication (MASON) 61
Helium: Solubility, blood (HAWKINS and SHILLING) 649
Hemoglobin: Adsorbed, isoelectric point (WHITE and MONAGHAN) 371
Production, anemia, nitrogen metabolism, liver function injury by chloroform, relation (DAFT, ROBSCHEIT-ROBBINS, and WHIPPLE) 391
Hexosemonophosphates: (RAYMOND) 375
Histidine: *dl*-Amino-N-methyl-, growth effect (FISHMAN and WHITE) 175
Hydrocyanic acid: Citrus leaves, fumigated (BARTHOLOMEW and RABY) 655
Hydrogen peroxide: Starch hydrolysis (BROWN) 417

I

Insulin: Blood sugar, effect (DOTTI and HRUBETZ) 141
Intestine: Small, vitamin C distribution (GLICK and BISKIND) 427
Iodine: Solutions, standard (SCOTT) 511
Iron: Available, determination, bipyridine (KOHLER, ELVEHJEM, and HART) 49

J

Jack bean: Globulin, crystalline, from canavalin (SUMNER and HOWELL) 607

K

Kynurenic acid: Excretion, mammals (GORDON, KAUFMAN, and JACKSON) 125

Kynurenic acid—*continued:*
Microidentification (GORDON, KAUFMAN, and JACKSON) 125

L

Lactic acid: Ionization (NIMS and SMITH) 145
Lactoflavin: Vitamin-free diets, contaminant (SUPPLEE, FLANIGAN, HANFORD, and ANSBACHER) 787
Lemon: Tree, gum (ANDERSON, RUSSELL, and SEIGLE) 683
Leprosin: Tubercle bacillus (ANDERSON, CROWDER, NEWMAN, and STODOLA) 637
Lipids: Animal (THANNHAUSER and REICHEL) 311
Tubercle bacillus, chemistry (ANDERSON, CROWDER, NEWMAN, and STODOLA) 637
Liver: Function, anemia, hemoglobin production, nitrogen metabolism, liver injury by chloroform, relation (DAFT, ROBSCHEIT-ROBBINS, and WHIPPLE) 391
Lysergic acid: Structure (JACOBS and CRAIG) 767
Lysozyme: Action, mechanism (MEYER, PALMER, THOMPSON, and KHORAZO) 479
Purification and properties (MEYER, THOMPSON, PALMER, and KHORAZO) 303

M

Mercapturic acid: *p*-Bromophenyl-, urine, determination (STEKOL) 279
Metabolism: Citric acid origin (SHERMAN, MENDEL, and SMITH) 247
Fat, plants (MACLACHLAN) 197
Intermediary, deuterium as indicator (SCHOENHEIMER and RITTENBERG) 505
Nitrogen, liver function, hemoglobin production, liver injury by chloroform, anemia, relation (DAFT, ROBSCHEIT-ROBBINS, and WHIPPLE) 391
—, suprarenalectomized rats (SANDBERG and PERLA) 35
Sterols, plants (MACLACHLAN) 197
Sulfur, dog and pig, comparison (STEKOL) 675
—, suprarenalectomized rats (SANDBERG and PERLA) 35
Metal: Catalysts, oxidations, biological, tissue inhibitors and, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 557
Thioglycolic acid oxidation, buffer, dithiol and, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 537
Methionine: -Deficient diet, cystamine, inadequate cystine, growth relation (JACKSON and BLOCK) 135
Methylcyclohexylcarbinol: Methylhexylcarbinol, configurational relationship (LEVENE and HARRIS) 55
Methylhexylcarbinol: Methylcyclohexylcarbinol, configurational relationship (LEVENE and HARRIS) 55

Milk: Goat, fat, fatty acids (RIEMENSCHNEIDER and ELLIS) 219
Mineral: Balance, alkaline and saline waters, effect (HELLER and HADDAD) 439

N

Nitrogen: Amino. *See* Amino nitrogen
Determination, Kjeldahl, copper selenite as catalyst (SCHWOEGLER, BABLER, and HURD) 749
Metabolism, liver function, hemoglobin production, liver injury by chloroform, anemia, relation (DAFT, ROBSCHEIT-ROBBINS, and WHIPPLE) 391
—, suprarenalectomized rats (SANDBERG and PERLA) 35
Solubility, blood (HAWKINS and SHILLING) 273

O

Oil: Wheat germ. *See* Wheat germ oil
Organs: Protein determination, gravimetric (ADDIS, POO, LEW, and YUEN) 497
Ovalbumin: Isoelectric point, factors influencing (SMITH) 473
Oxidations: Biological (BARRON) 695
—, metal catalysts and tissue inhibitors, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 557
—, — —, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 537

P

Pantothenic acid: Yeast growth, effect (RICHARDS) 531
Pepsin: Crystalline, amino acids determination (CALVERY, HERRIOTT, and NORTHROP) 11
Egg albumin, crystalline, hydrolysis, amino acids and amino nitrogen liberation rate (CALVERY, BLOCK, and SCHOCK) 21
— —, —, — products (CALVERY and SCHOCK) 15
Peptides: Dissociation constants, apparent acid, aqueous formaldehyde solution (DUNN and LOSHAKOFF) 691
Formol titration, glass electrode (DUNN and LOSHAKOFF) 359
Phosphatase: Polydiamino-, polydiaminophosphatide hydrolysis, cerebrosidase relation (THANNHAUSER and REICHEL) 311
Phosphatide: Polydiamino-, hydrolysis, polydiaminophosphatase, cerebrosidase relation (THANNHAUSER and REICHEL) 311
Pig: Sulfur metabolism, dog and, comparison (STEKOL) 675
Pine: Slash. *See* Slash-pine
Pinus caribæa: *See* Slash-pine
Plants: Fat and sterol metabolism (MACLACHLAN) 197
Polydiaminophosphatase: Polydiaminophosphatide hydrolysis, cerebrosidase relation (THANNHAUSER and REICHEL) 311

Polydiaminophosphatide: Hydrolysis, polydiaminophosphatase, cerebrosidase relation (THANNHAUSER and REICHEL) 311

Polypeptides: Degradation, stepwise (BERGMANN and ZERVAS) 341

Porphyrins: Urine, disease effect (DOBRINER) 1

Pregnancy: Corpus luteum vitamin C, relation (BISKIND and GLICK) 27

Propane: 1-Amino-2-hydroxy-, synthesis, new (LEVENE) 153

Protein(s): Blood plasma, specific gravity and, relation (WEECH, REEVES, and GOETTSCH) 167

— serum, specific gravity and, relation (WEECH, REEVES, and GOETTSCH) 167

Disulfide groups reduction, immunological effect (BLUMENTHAL) 433

Organ, determination, gravimetric (ADDIS, POO, LEW, and YUEN) 497

Total, body, determination, gravimetric (ADDIS, POO, LEW, and YUEN) 497

Transudate, specific gravity and, relation (WEECH, REEVES, and GOETTSCH) 167

Provitamin: D, heat-treated cholesterol (HATHAWAY and LOBB) 105

Pyruvic acid: Oxidation, gonococci effect (BARRON) 695

R

Resins: Slash-pine growing tips (HALL and GISVOLD) 487

S

Slash-pine: Fats, waxes, and resins, growing tips (HALL and GISVOLD) 487

Sodium: Blood serum, determination (BALL and SADUSK) 661

Specific gravity: Blood plasma, protein and, relation (WEECH, REEVES, and GOETTSCH) 167

— serum, protein and, relation (WEECH, REEVES, and GOETTSCH) 167

— —, water and solute molality, relation (SUNDERMAN) 111

Transudate, protein and, relation (WEECH, REEVES, and GOETTSCH) 167

Starch: Hydrolysis, ferrous sulfate (BROWN) 417

—, hydrogen peroxide (BROWN) 417

Sterols: Metabolism, plants (MACLACHLAN) 197

Strophanthidin: Acid ("$C_{23}H_{30}O_8$") from, nature (ELDERFIELD) 631

Dihydro-, cyanhydrin syntheses with (JACOBS and ELDERFIELD) 625

Strophanthin: (JACOBS and ELDERFIELD) 625

(ELDERFIELD) 631

Anhydroaglucone derivatives, oxidation (JACOBS and ELDERFIELD) 611

Sulfur: Metabolism, dog and pig, comparison (STEKOL) 675
—, suprarenalectomized rats (SANDBERG and PERLA) 35

Suprarenalectomy: Nitrogen and sulfur metabolism (SANDBERG and PERLA) 35

T

Thioglycolic acid: Oxidation, metal, buffer, and dithiol, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 537

Tissue: Extracts, blood serum cholesterol esterification, effect (SPERRY) 599
Inhibitors, oxidations, biological, metal catalysts and, effect (KHARASCH, LEGAULT, WILDER, and GERARD) 557

Tobacco: Leaves, asparagine (VICKERY and PUCHER) 157
—, glutamine (VICKERY and PUCHER) 157

Tocopherol: α-, vitamin E relation (EVANS, EMERSON, and EMERSON) 319
—, wheat germ oil, isolation (EVANS, EMERSON, and EMERSON) 319

Transudate: Specific gravity and protein, relation (WEECH, REEVES, and GOETTSCH) 167

Trypanosoma equiperdum: Glucose metabolism (REINER, SMYTHE, and PEDLOW) 75

Trypanosoma lewisi: Glucose metabolism (REINER, SMYTHE, and PEDLOW) 75

Trypsin: Canavalin, digestion effect (SUMNER and HOWELL) 607

Tryptophane: Egg albumin, crystalline, hydrolysis, liberation rate (CALVERY, BLOCK, and SCHOCK) 21

Tubercle bacillus: Leprosin (ANDERSON, CROWDER, NEWMAN, and STODOLA) 637

Tyrosine: Egg albumin, crystalline, hydrolysis, liberation rate (CALVERY, BLOCK, and SCHOCK) 21

U

Urine: Porphyrins, disease effect (DOBRINER) 1

V

Vitamin: C, corpus luteum, estrous cycle and pregnancy, relation (BISKIND and GLICK) 27
—, small intestine, distribution (GLICK and BISKIND) 427
E, α-tocopherol relation (EVANS, EMERSON, and EMERSON) 319
—. *See also* Tocopherol
-Free diets, lactoflavin in (SUPPLEE, FLANIGAN, HANFORD, and ANSBACHER) 787
Pro-, D, heat-treated cholesterol (HATHAWAY and LOBB) 105

W

Water: Alkaline and saline, mineral balance and excretion paths, effect (HELLER and HADDAD) 439
Blood serum, solute molality and specific gravity, relation (SUNDERMAN) 111
Body, distribution, body electrolytes and, relation (HARRISON, DARROW, and YANNET) 515
Waxes: Slash-pine growing tips (HALL and GISVOLD) 487
Wheat germ oil: α-Tocopherol isolation (EVANS, EMERSON, and EMERSON) 319

X

Xanthophyll: Determination (CLAUSEN and MCCOORD) 89
Xylose: *d*-, metabolism (BLATHERWICK, BRADSHAW, CULLIMORE, EWING, LARSON, and SAWYER) 405

Y

Yeast: Extract, fermentation and respiration, dyestuffs effect (MICHAELIS and SMYTHE) 717
Growth, pantothenic acid effect (RICHARDS) 531
